

3.1 HDRI lighting

Ordu, 12.05 – 16.05 2025

1. What is HDRI lighting?

HDRI Lighting is technically called 'image-based lighting'. Image-based lighting works by applying a high dynamic range image map (HDRI map) onto an environment light in 3D software.

HDRI is short for High Dynamic Range Image. It's a panoramic photograph that covers the entire field of vision that contains a large amount of data which can be used to emit light into a CG scene.

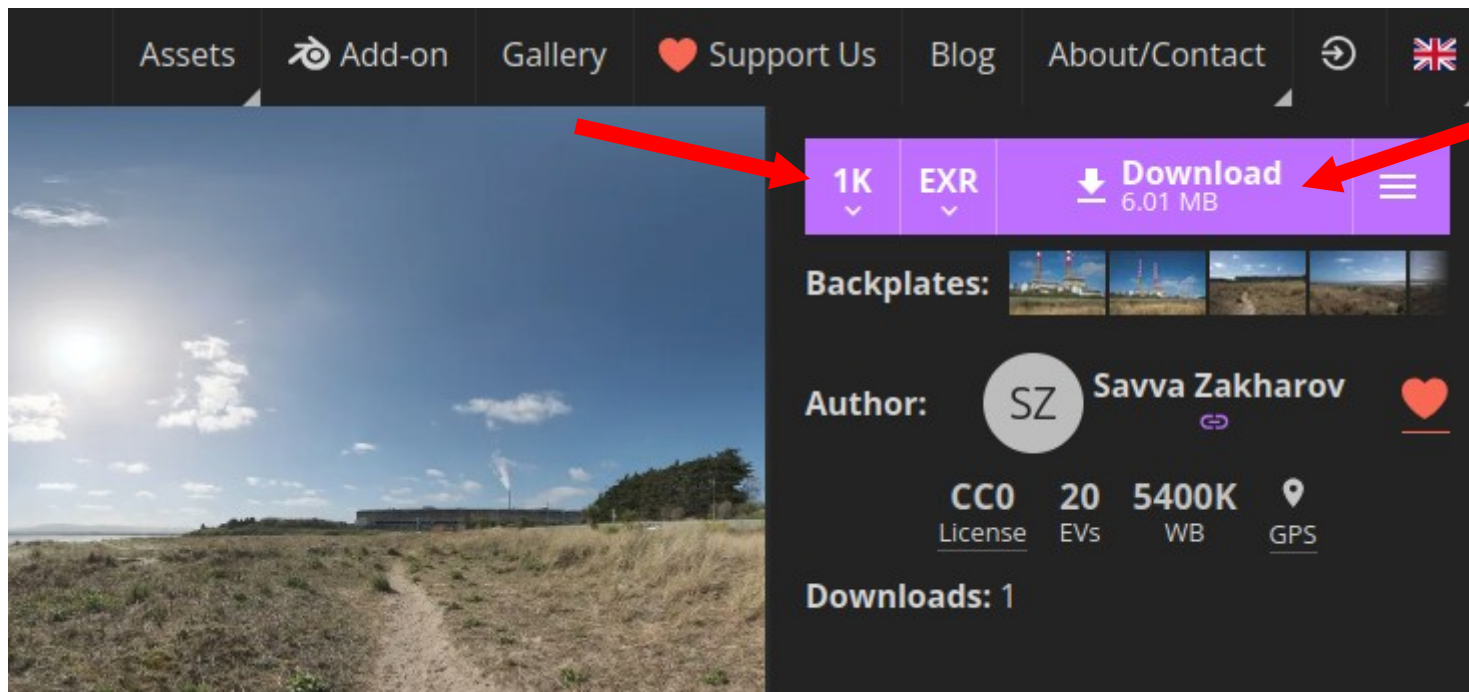

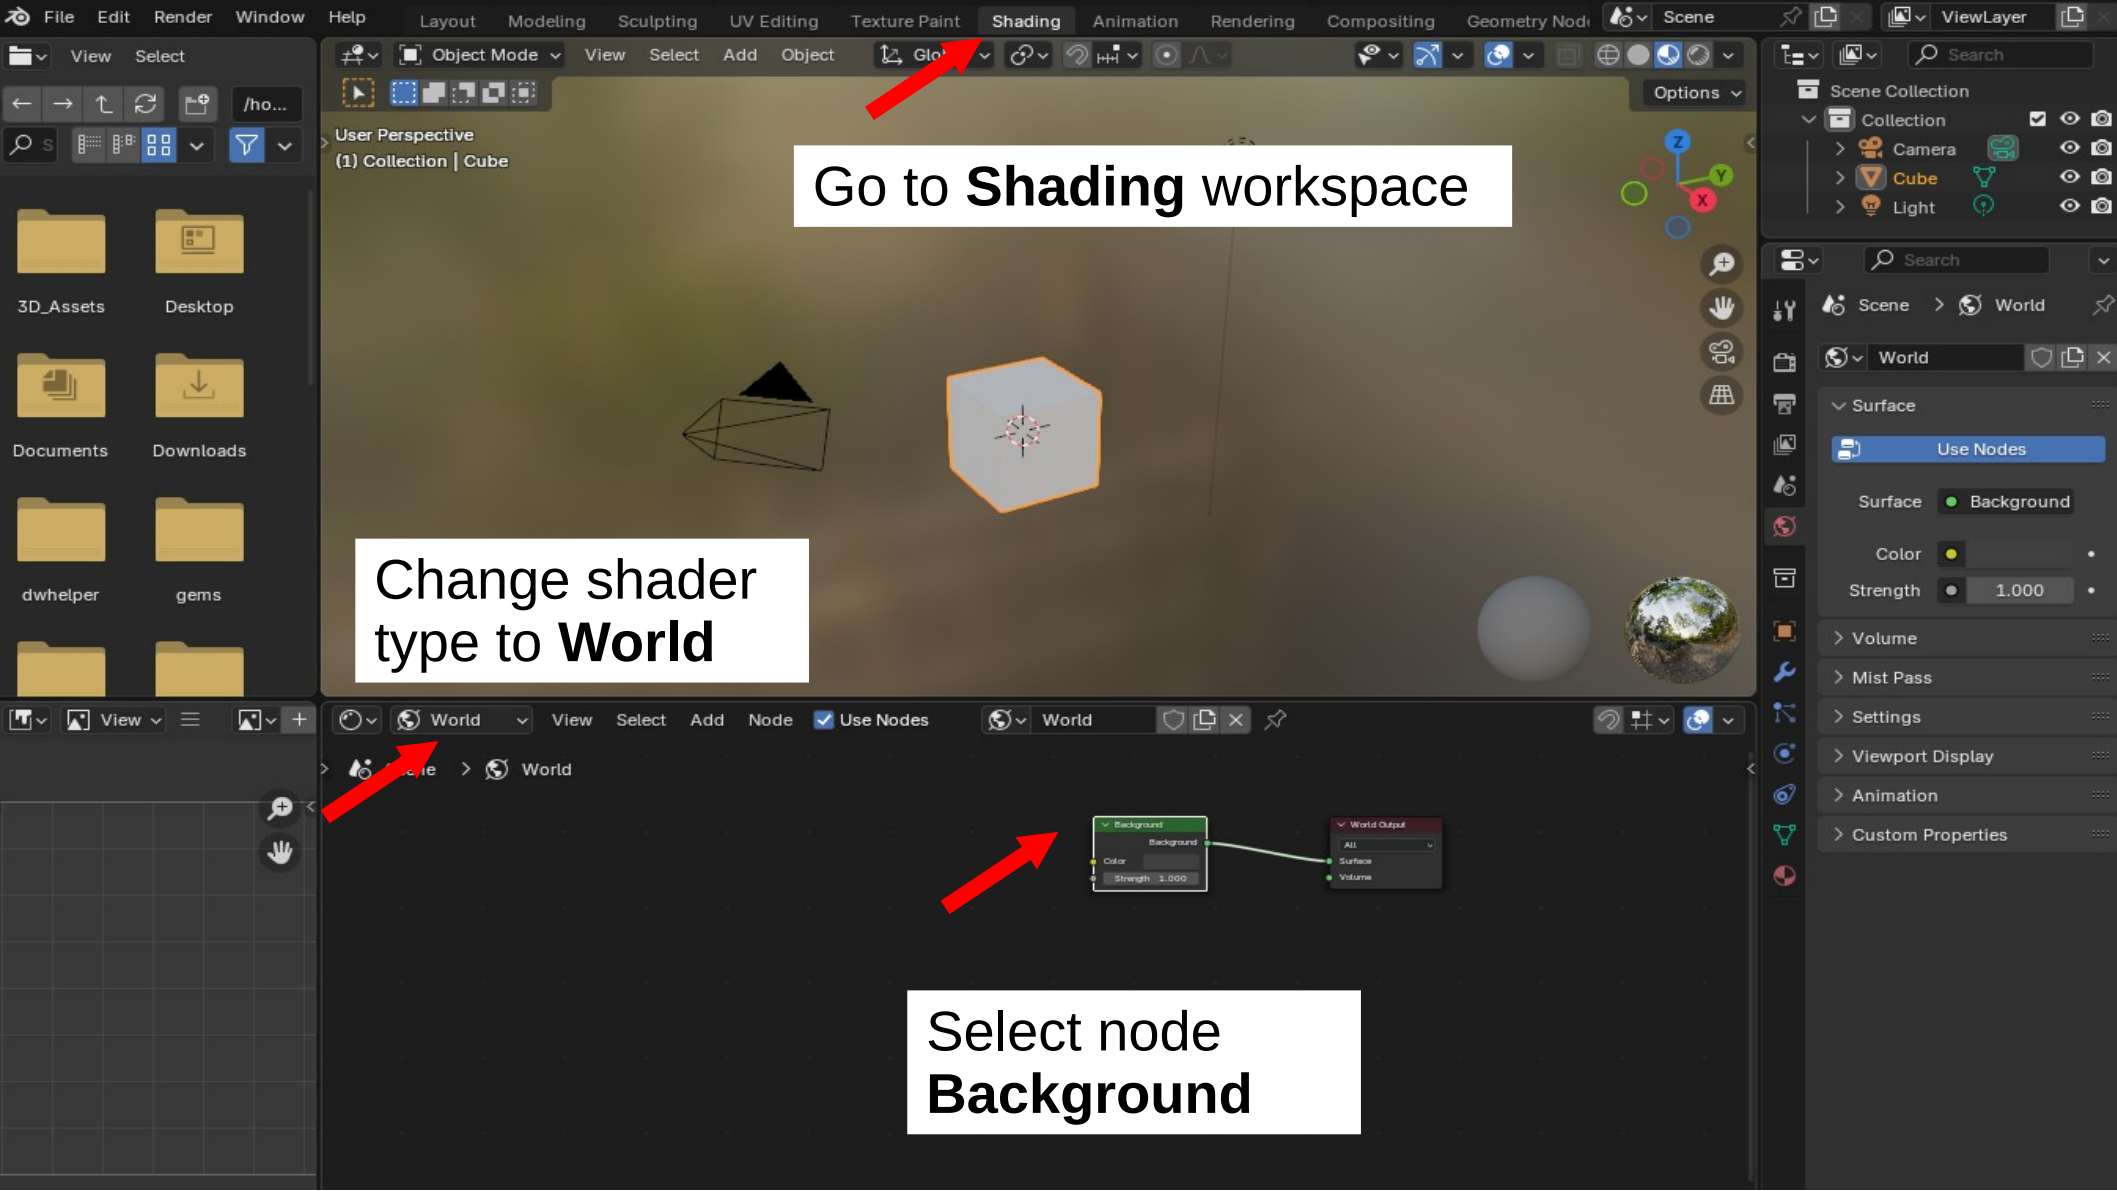

2. Where do I get HDRI?

Visit <https://polyhaven.com>

After choosing the HDRI, choose **1K** and **Download**.

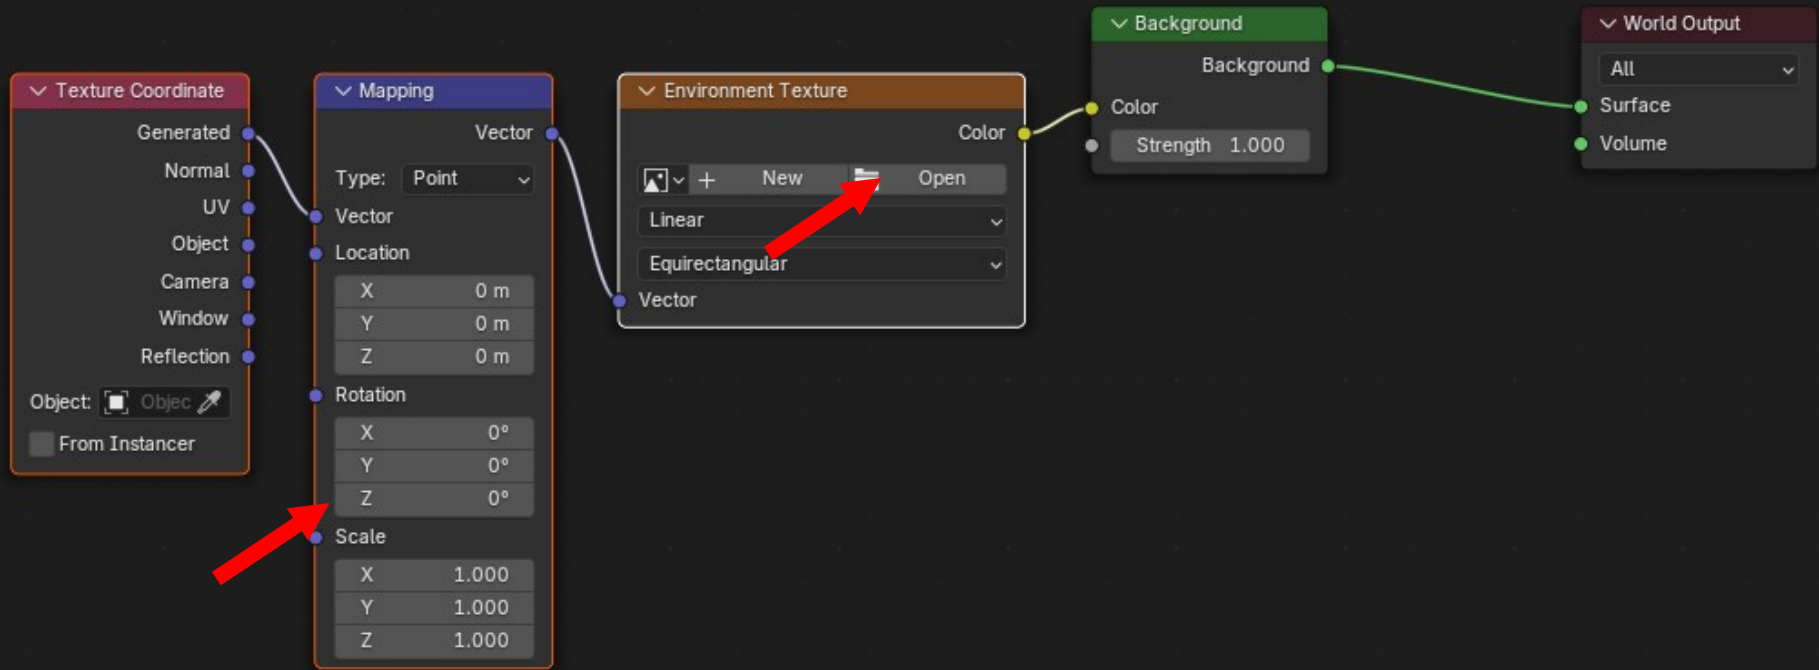

Go to **Shading** workspace

Change shader
type to **World**

Select node
Background

Press **Ctrl+T** (only works if Node Wrangler addon is active)

Open HDRI

You can **rotate** light/shadows by rotating around **Z** axis
